INFLATABLE'S EXPERT POOL VACUUM KIT

IMPORTANT: READ AND UNDERSTAND THE INSTRUCTIONS COMPLETELY BEFORE STARTING

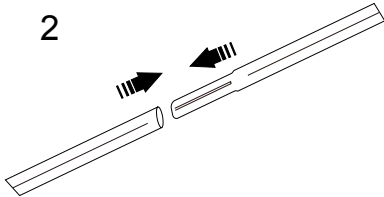

◆ POOL VACUUM ASSEMBLY INSTRUCTIONS

1

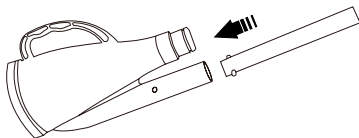

Slide the **SUCTION HEAD** onto the lid of the **MAIN BODY**.

2

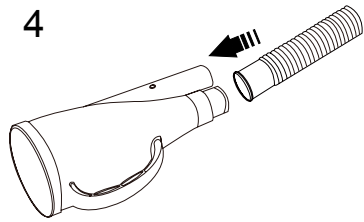

Assemble the four **POLES** by fitting the smaller end of one **POLE** into the larger end of the next one. Slide together until the grooved areas are fully inserted.

3

Insert the smaller end of the assembled **POLES** into the **MAIN BODY** and slide together until the grooved areas are fully inserted.

4

Connect the **HOSE** onto the **MAIN BODY** and slide it as far as it will go.

◆ HOW TO USE YOUR VAC

1. Immerse the assembled **VAC** and its hose into your above ground pool and let it fill with water until all air escapes.

IMPORTANT: Trapped air in your vacuum system may prevent the pump from operating correctly. In this case open the release valve of your pump and shake the hose until all air bubbles escape and only water drops out of your pump.

2. Switch off the pump and remove the cover of the water intake of your above ground pool. Take the **CORRECT CONNECTORS** included with your **VAC** and attach the correct one to the water intake. Tighten by hand only.

3. Take the open end of the **HOSE** and connect it onto connector at the water intake. Slide the **HOSE** as it will go.

4. Switch on the pump of your pool and start using **VAC** to clean the bottom of your pool.

5. Your **VAC** is made to vacuum debris from the ground of your above ground pool. The internal collecting bag is designed to trap leaves and larger debris, which could otherwise clog the filter of your pool.

Make sure to empty this pre-filter regularly to ensure the maximum suction possible.

6. Never use your **VAC** without the collecting bag. Failure to do so may clog the filter of your pool.

◆ HOW TO EMPTY THE COLLECTING BAG OF YOUR VAC

5

Open the lid of your **VAC** and take out the collecting bag. Empty the collecting bag of your **VAC** by removing the leaves and other debris and then rinse it.
