

Code E3

Situation: High water temperature warning.

Causes: The water temperature in the pump exceeds 42°C (108°F).

Reason 1: The water inlet or outlet on the inner wall are blocked.

Solution 1: Clean the water inlet and outlet.

Reason 2: The hose connecting the inside and outside of the Liner is not straightened, or the hose is flattened, which reduces the water flow speed.

Solution 2: Pump the Liner with enough air again, which will straighten the hose connecting the inside and outside of the Liner. If it fails, replace a new liner.

Reason 3: The filter box is in the wrong position.

Solution 3: Put the filter cartridge in the support box then screw it onto the lower suction inside the basin.

Reason 4: The inlet and outlet of the pump are blocked by scale.

Solution 4: Cut off the power then remove the pump. After that clean the scale on the in/outlet ports.
